Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • Am I eligible for a loan? • How can I improve my credit score? • I need to know my EMI before applying.		THINKS • Will my loan application be approved? • Can I afford the monthly EMI? • I want reliable financial advice.
	Loan Applicant <i>(Salaried Individual)</i>	
DOES • Checks loan eligibility online. • Uses an EMI calculator. • Looks for ways to improve credit score.		FEELS • Confused about loan approval. • Worried about financial commitments. • Confident after receiving AI-based guidance.
